The Australian Census Analytic Program

Dennis Trewin

Australian Bureau of Statistics

Abstract

The Australian Census Analytic Program (ACAP) is a collaborative venture between the ABS and some of Australia's foremost academics and social researchers.

ACAP publications cover a range of themes; combining detailed analysis of census data with information from other sources. While the census provides extensive information about Australian society, combining it with other data sources greatly increases the potential for valuable research and analysis.

This issue-driven research goes beyond the usual summary analysis of census data and contains important but previously unrevealed information about major trends and issues. Findings are geared towards practical policy development rather than a purely academic audience, and will contribute to the policy agenda over the next decade.

Full papers from ACAP can be found on the ABS website. www.abs.gov.au (search for ACAP).

Paper prepared for the 12th Biennial Conference of the Australian Population Association, 15-17 September 2004, Canberra.
